

One lease. One dashboard.

Use for a fresh renewal or one already underway. Opening a section does not complete it.

1 Lease details

Confirm the exact people, dates and base rent. Compare sources; keep additional charges and listed rent separate.

2 Comps

Run RentCast deliberately, inspect comp/trend evidence, and save preparation before asking the owner.

3 Owner

Review and copy the owner request or prepare an unsent Gmail draft. Record actual outreach and the exact response.

4 Tenant

Use the current owner-approved rent and dates. Review applicable charges and links; record the actual tenant response.

5 Documents and completion

Record applicable documents, signatures and follow-ups. Finish with explicit staff-recorded completion.

Decision branches: waiting keeps the lease open; a counteroffer returns to owner review; a decline uses the approved non-renewal handoff.

Do the work, then record it.

The same dashboard keeps recorded activity, source changes and provider evidence distinct.

Correct a fact

In **Correct a lease fact**, select the fact, reviewed value, source/reason and supported destination. An Editor saves a proposal; the approving role reviews it. Admin confirms each exact source effect and reads its returned result.

Understand separate outcomes

An existing-row Sheet update and a RentVine change each have their own preview, confirmation and receipt. A partial success stays partial. Recover an uncertain existing attempt before another write. Corrections use a new current-state preview; row deletion is unavailable.

Prepare the message

Use **Owner message preparation** or **Tenant message preparation**. Review wording, applicability, separate charges, links and your signature. Save the reviewed preparation. **Copy formatted body** preserves formatting; **Copy plain text** supports a manually reviewed portal/text message.

Create an unsent draft

Preview unsent Gmail draft shows exact recipients, subject, body and any attachment. Confirm only that draft. A person reviews and sends in Gmail. A draft is never evidence of sending; recover an uncertain draft through its exact saved attempt.

Resume and finish

Record actual outside work with its source/channel and occurrence evidence. Owner approval and tenant response are separate. **Not applicable** needs its approved rule and reason; unknown stays unfinished. **Record staff completion** explicitly means completion recorded by staff. Reopening the page retains the cycle; a later renewal starts a new reviewed cycle.

Links, documents and evidence.

Missing team inputs are localized. They do not block the dashboard, manual work or release.

Leave unknown links blank

The persistent labeled boxes include **Insurance flyer**, **Renewal information form**, the resident benefits flyer and all seven legal-form locations. Admin may save verified, applicable HTTPS links later. Blank means pending team input. Blank or unverified values never become customer links or legal content.

Use the exact document handoff

The document panel names missing approved forms/mappings, connection/selection and activation gates. S106 owns connection; S34 owns exact loop and upload actions. The Dotloop keys remain closed until their separate gates pass. A location link alone is not an approved publication.

Inspect files before signature work

The normal packet preview shows exact participants, mapped facts and included publications. Download and inspect the approved file. Mapped facts shown in the preview do not fill its bytes; review and complete applicable fields in Dotloop before a person sends for signature.

Read evidence honestly

A provider receipt proves only its bounded operation. **Refresh from Dotloop** records loop metadata. A file name proves document presence, not signatures or verified content. A matching loop name without the attempt receipt does not prove creation. Record actual returned signed artifacts through the existing evidence/manual controls.

Facilitator checklist

Choose the exact lease; inspect its sources; propose a correction; distinguish source outcomes; recover an uncertain attempt; prepare/copy a message; record outside work; close and reopen the lease. Cover a fresh and an already-started renewal, a counteroffer and missing data. Never create a customer effect just to demonstrate a control.
