

PMI KC / Renewal meeting brief

Wednesday, 9 September 2026: user-supplied meeting identity. Updated 10 September after the verified S113 production release.

Current delivery

The consolidated renewal workflow is live. Backend verification, all 33 review findings, exact-commit CI, candidate assurance, promotion and five-minute observation passed. The three-page operator guide and all 42 control steps passed. Human usability review remains unrecorded.

Walk through one lease

Choose the exact lease. Inspect facts and sources. Prepare a correction and distinguish each source result. Review comps and copyable messages. Record actual owner/tenant responses and outside work. Close and reopen the saved cycle; return to the same filtered list. Include waiting, a counteroffer and missing data.

Keep evidence distinct

A staff completion record reports actual work. A provider receipt proves only its bounded operation. A draft is unsent; a document name proves presence, not signatures. Every message send stays with a person. Do not create customer effects merely to demonstrate completion.

Accepted pending-team inputs

Insurance flyer, renewal information form and approved legal-form location boxes may remain blank. Admin can save verified, applicable links later. Blank or unverified values never become real customer links or legal content. Only the resource-dependent output waits; manual S113 work and release proceed independently.

Document continuation

S106 owns real Dotloop credentials, managed connection and resource selection. S34 owns approved forms/mappings and separately activated exact loop/upload effects. Current keys remain closed. The preview does not fill file bytes. A person completes/reviews applicable form fields and sends for signature in Dotloop; actual returned artifacts are recorded separately.

Verified release, actual work

Serving commit f5faf16 passed canonical version, traffic, configuration and backend readbacks. Both supplied templates are approved. No customer completion, live draft, paid comp or signature effect was created for demonstration. Assign only real owners and agreed dates; no commitment is inferred.
